Secure Enterprise Computing, Inc. Offers Wireless Risk Assessment Services

RTP, N.C. – In light of recent indictments handed down by the US Dept of Justice for the largest wireless hacking ring ever prosecuted (see CNN article:

<http://www.cnn.com/2008/CRIME/08/05/card.fraud.charges/index.html?iref=newssearch>)

Secure Enterprise Computing, would like to remind our customers that we offer a range of wireless design, implementation and security services, and have successfully completed the Wireless Risk Assessment certification for AirDefense – the world’s leading wireless intrusion prevention solution provider. This certification was offered to a select number of AirDefense partners with the skills, processes and experience to offer best-in-class Wireless Risk Assessments. AirDefense developed this program to identify and promote specialists able to assist organizations in investigating business and compliance risks from the introduction of wireless technologies.

Randall Bennett, President of Secure Enterprise Computing, Inc. stated, “We’re excited about this relationship with AirDefense because it furthers our ability to help customers reach the goal of having secure wireless applications and infrastructures available 24 hours a day, 365 days per year. The uniqueness of the solutions we can offer our customers with AirDefense provides them with tremendous advantages. Now, our customers can be secure using wireless in industries such as finance and pharmaceutical, affording them many competitive advantages. In many cases, the return can be realized in just a few months, which is staggering.”
